Category: [Laser Cutter News](#)

The combination of laser cutting machine and acrylic, the [acrylic laser cutting machine](#) can not only be customized for acrylic stands, mobile phone holders, key chains, bookmarks, etc. The form expresses memorable silhouettes, bringing us different nostalgic experiences.

With the increasing complexity of cutting and engraving technology, traditional manual processing and mechanical processing are restricted by equipment and technology, and the precision of processed products is low, which affects product quality and economic benefits to a certain extent.

According to the characteristics of high energy density and strong operability of lasers, on the basis of many years of production of laser devices, a new generation of precision laser cutting machines has been successfully developed. The equipment processes a wide range of materials, with smooth cutting edges, no burrs, no grinding, no dust, fast processing speed, high precision, less waste, and high efficiency. It is the best choice for all industries.

Imported laser makes the edge of the cutting effect smooth. The integrated frame structure design makes the machine run stably and has no noise.
