Basic knowledge of woodworking [engraving machine](#)

Uses: Mainly used in the processing of wooden wood to make it more aesthetically pleasing. There are many types of woodworking engraving machines and many brands, resulting in uneven prices.

But no matter what the price is, when choosing a woodworking engraving machine, we still need to pay attention to its work needs and industry application parameters to choose.

In addition, when using a woodworking engraving machine, you should master the most basic engraving performance:

1. The difference between Yin engraving and Yang engraving
2. Depth requirements for engraving
3. Layered carving technique
4. Mosaic path of woodworking engraving machine
5. Tool compensation
6. The direction of rotation when crocheting
7. Bottom milling method
