When using the fiber laser [metal laser cutting machine](#), we should pay attention to fire prevention measures and take good fire prevention measures to ensure our safety when using the metal laser cutting machine. Therefore, we should understand the fire prevention matters that should be paid attention to when using metal laser cutting machines.

So, what fire prevention matters should be paid attention to when using the metal laser cutting machine?

1. When using the metal laser cutting machine, check whether the gas path is completely sealed. If there is a leak, it will cause the burning of these flammable gases;
2. Keep the metal laser cutting machine away from open flames, otherwise it is easy to cause a fire due to excessive temperature;
3. Do not let the light spot of the metal laser cutting machine stay in one place all the time, so as to effectively prevent fire.

When using the metal laser cutting machine, you must pay attention to the above fire prevention matters, so as to ensure the safety of the metal laser cutting machine.
