Category: [Laser Cutter News](#)

Although self-adhesive is not an expensive thing, it often carries an important embodiment of a company's brand image, and is an important part of reflecting product quality and laser consumers' desire to buy. The cutting of self-adhesive has gone through several important stages, from the traditional hand-carved hollow, to the cutting plotter and die-cutting machine, and now the laser die-cutting machine, these optimization stages allow the self-adhesive shape to be better. The attitude is shown in front of customers. So, how do we choose the self-adhesive laser cutting machine correctly?

A new choice for self-adhesive cutting - laser cutting machine/laser die cutting machine

As a self-adhesive label material, self-adhesive is a composite material that uses paper and film (other special materials) as a combination, an adhesive on the back, and a silicon protective paper as the backing paper. Bags, commodities, chemicals, logistics, medicine, electronics, electrical appliances... There are more and more industries using self-adhesive, such as self-adhesive labels for medicine packages. With the sales of over-the-counter drugs, drug manufacturers and consumers pay more attention to drug packages, which will largely promote the accelerated transformation of drug manufacturers from traditional labels to self-adhesive labels. Today, self-adhesive label cutting solutions have also evolved from early manual cutting, die-cutting machines, and cutting machines to more advanced self-adhesive laser cutting machines.
