Laser cutting machine

1. Cutting material and scope of demand:

First determine the material and thickness of the cutting material, and then determine the required equipment power and table size. In the market, the power of laser cutting machines varies, and most manufacturers can make workbenches according to customer requirements.

2. Preliminary selection of manufacturers:

After roughly determining your needs, you can go to the market or colleagues who have purchased equipment to understand the performance and parameters of the equipment. Select 2-3 manufacturers with strength and price advantages for preliminary communication and proofing, and then visit the intended manufacturers for on-site inspections, and then negotiate in detail about equipment prices, payment methods, after-sales conditions, etc.

3. Core components of cutting equipment:

For some important parts of cutting equipment, attention should be paid during the purchase process, especially laser cutting heads, generators, servo motors, etc., must be distinguished from domestic or domestic imports, because these core components directly affect the cutting speed and accuracy of the equipment.

4. Operation performance of cutting equipment:

Simple and easy to operate is an intuitive and important aspect for customers to choose equipment. It can be operated by personnel after short-term training, which can reduce the learning time of personnel and reduce the cost of use.

5. After-sales service of cutting equipment:

During the use of the equipment, it is inevitable that there will be some problems. At this time, timely and high-quality after-sales service is particularly important. Don't just look at the manufacturer's price factor, but choose from multiple aspects such as equipment stability and performance.

Because in the subsequent use of equipment, you will understand the importance of after-sales service.

The above points are some suggestions for choosing a laser cutting machine manufacturer. I hope it can give you some guidance when you are about to purchase equipment. Considerations should be taken when purchasing specific equipment. Choosing a capable manufacturer can not only make your equipment last longer, but also save money.
