Leather is everywhere around us, whether it is genuine leather or artificial leather, from small leather shoes to leather clothing, car seat cushions, etc. With the advancement of technology, [leather cutting equipment](#) is also being updated. Now non-metallic laser cutting machines are used in leather cutting welcome in the industry.

Non-metallic cutting machines are mainly applied to materials such as leather, cloth, denim velvet, pure cotton and silk, etc., and can automatically feed materials, which greatly increases production efficiency. The market responds quickly and completes the delivery in time.

Product features of non-metallic laser cutting machine:

1. The large-format laser cutting is smooth and fine, which can meet the blanking process of the whole piece of fabric.
2. Fully automatic feeding and receiving, saving time and increasing work efficiency.
3. The feeding system adopts the B-shaped table top, and the crawler automatically feeds the material, which is convenient for the processed products to move freely on the table.
