The same tissue box, but this tissue box processed by [laser cutting machine](#) technology has better light transmission and crystal transparency, which is very suitable for home, hotel, office, etc., and can also use laser engraving technology to engrave personality logo.

When processing plastics, the traditional mechanical processing method is to directly act on the plastic workpiece such as a drill bit, which will uniformly cause plastic deformation, and will also form burrs at the processing point. In order to meet the production requirements, some processing is required, and the processing speed will be It will be slower, and the precision will not meet the requirements. However, the use of laser cutting can avoid the above disadvantages, greatly speeding up the research and development of new plastic products, and also accelerating the application of plastics in high-end fields. With the improvement of people's living standards, the market prospect of laser cutting machine processing acrylic gifts is getting better and better. Laser cutting machine processing has won people's love for its high-speed and simple processing advantages. For example, laser cutting and processing acrylic handicrafts can be stored for a long time without changing color and moisture, and can be permanently bright and beautiful.
