Category: [Laser Engraver News](#)

Due to the development of technology, the monotonous leather fabric sofa without innovation can no longer meet people's needs. Therefore, the leather laser engraving all-in-one machine came into being. CNC laser engraving all-in-one machine is a product that integrates light, machinery and electricity. It integrates laser information conversion, storage, transmission and other parts, and has functions such as interactive processing with computers and real-time laser.

Leather laser cutting

The advantages of the leather laser engraving all-in-one machine have been loved by the majority of manufacturers, so the market demand has grown rapidly, and various brands have been born one after another. If there is a market, there will be competition. In order to highlight their own brands, manufacturers of clothing and fabric sofas will put their own logos on their products, while marking on digital cameras with traditional inkjet coding methods is easy to fall off and will be recognized. The counterfeit and shoddy products of lawbreakers are marked with their own logos.

Leather Laser Engraving

The leather [laser engraving machine](#) uses laser beams to permanently mark the surface of different substances. The marking effect is to expose deep substances through the evaporation of surface substances, and to carve beautiful patterns, trademarks and characters. Compared with the traditional ink coding method, the leather laser engraving all-in-one machine prints beautifully and permanently, is not easy to erase, and has good anti-counterfeiting performance; it has no force on the surface of the workpiece, does not produce mechanical deformation, and does not cause corrosion on the material surface.

The leather laser engraving all-in-one machine completes the exquisite marking; air-cooled cooling, the machine is small in size, the output beam quality is good, and the reliability is high. The all-in-one laser engraving machine for clothing, cloth and sofa is a kind of non-contact processing, which does not damage the product, does not wear the tool, and has good marking quality.
