The first point: the demand for purchasing [laser cutting machines](#): buyers must be clear about what materials they buy laser cutting machines for processing, or which industries, what is the thickness of the cutting materials, and what are the specifications of the materials.

The second point: choose the model and power: the common laser cutting machine is divided into plate cutting, pipe cutting, plate and tube integrated cutting, and the model is determined according to the processing requirements. The power of the laser cutting machine varies, and the cutting power is determined according to the cutting material, cutting thickness, etc. If you do not know the cutting power, you can consult your business manager.

The third point: for the choice of the manufacturer, it is not wrong to shop around. You can go to the market to learn about the person who has bought a laser cutting machine, and ask about the performance and parameters of the machine, which will definitely make you gain a lot. Choose a manufacturer with a good reputation to conduct on-the-spot inspections, and conduct detailed discussions on machine prices, skill training, payment methods, and after-sales service.

The fourth point: the choice of laser cutting machine configuration, we also need to pay attention when purchasing. Such as lasers, laser heads, servo motors, rail racks, chillers, etc.

Fifth point: After-sales service Laser cutting machines will inevitably encounter problems during use. It is not important whether the manufacturer can provide timely solutions. This is also an important factor that users need to consider when purchasing laser cutting machines.
