FAQs

What is laser engraving?

Laser engraving is a process of using a laser beam to etch or mark an object. The laser beam is directed onto the surface of the object, which is then vaporized or melted away, leaving behind an engraved design.

What materials can be laser engraved?

Laser engraving can be used on a variety of materials, including wood, leather, acrylic, paper, fabric, and cardboard.

What is the maximum engraving area of a laser engraver?

The maximum engraving area of a laser engraver depends on the model. Some laser engravers have a maximum engraving area of 12" x 8", while others have a maximum engraving area of 24" x 12".
