After buying a new [laser cutting machine](#), users don't care how to use the equipment. So we are here to explain to you how to use the laser cutting machine.

1. Acceptance Check whether the product is the product you purchased, check whether the product is damaged during transportation, and confirm whether all parts are complete and whether there is any damage. In case of transportation damage, inconsistent laser cutting machine model, missing parts, etc., please contact the after-sales service in time.
2. Laser cutting machine location and installation requirements The equipment should be installed in a dry and well-ventilated environment with an ambient temperature between +4°C and +33°C; in order to ensure good cutting quality, it should be kept away from vibration; the ground where the equipment is placed should be flat, and the height of the bed, optical fiber and other components should be different. Can not exceed 10mm.
3. After-sales engineer training The after-sales engineer will explain to you the knowledge of equipment installation, parameter adjustment, daily maintenance and maintenance, etc., to facilitate your use of laser cutting. If you have specific questions, you can also consult the after-sales engineer. The maintenance of the laser cutting machine in use is related to the condition of the machine you are using, the cutting effect of the machine, the life of the machine parts, etc. We must treat our machines with care, so as to generate the greatest benefits.
