

# WHAT IS THE DIFFERENCE BETWEEN A LASER ENGRAVING MACHINE AND A LASER ENGRAVING MACHINE/LASER MARKING MACHINE/LASER LASER MACHINE?

*Posted on 2023-08-15 by redsail*

Category: [Laser Engraver News](#)

Laser engraving machine is a laser equipment used for internal engraving of crystal crafts, etc. It can realize three-dimensional engraving, and it is realized by combining the principle of vibrating mirror and Z-axis mechanical movement.

Laser engraving machine, generally plane engraving, such as leather, printing offset, etc., is to drive the laser machine with the peripheral xy operating mechanism to carry out the engraving operation.

Laser marking machine is a computer-controlled oscillating mirror that drives the laser beam to move in the XY direction, so as to achieve light engraving marks on the surface of objects.
