1. First of all, determine the laser cutting machine you will buy. Some manufacturers have many kinds of products. When purchasing a laser cutting machine, they hope that one laser equipment can cut all their own varieties. In fact, the laser effect of special machine is better than that of compatible machine.
 2. Choose laser cutting machine enterprises with a long history as far as possible, with guaranteed quality. Select the model with mature technology and stable quality to make the cutting faster and more stable, with low energy consumption, low manual work and low scrap rate. The laser cutting machine is a consumable machine. If you buy a low-quality machine, the amount of cutting film accumulated in the daily production in the future will not be small.
3. If there is a field visit, we should pay attention to the major aspects, but also pay attention to the small details, which often determine the quality of the whole machine. Try to test the machine with samples.
4. In terms of after-sales service, "within the circle" should have a good reputation. Timely after-sales service is very important for processing enterprises.
 5. The laser cutting machine trusted by peers can be preferred.
6. Try to purchase a fully automatic continuous feeding mechanism with simple operation and maintenance, complete accessories, which can improve cutting efficiency and reduce labor costs, and is suitable for the long-term development of enterprises.
